

First Assembly Language Code Assignment

Flowchart

```
graph TD
    Start --> Store[Store message]
    Store --> Print[Print message]
    Print --> End[End program]
```

Challenges

I was having a problem with learning the syntax of Assembly, since it's very different from other programming languages. I also learned about system calls to be able to write text to the screen and properly close the program.

Assembly Code

```
section .data
    message db "I came,", 10
             db "I saw,", 10
             db "I conquered.", 10

    length equ $ - message

section .text
    global _start
```

`_start:`

```
mov eax, 4
mov ebx, 1
mov ecx, message
mov edx, length
int 0x80
```

```
mov eax, 1
mov ebx, 0
int 0x80
```

Output

I came,
I saw,
I conquered.
